

The International Agency for Research on Cancer (IARC) is pleased to announce a meeting on

# EPIGENETICS AND ENVIRONMENTAL ORIGINS OF CANCER

11-12 June 2016 - IARC, Lyon, France

**Introduction:** Recent studies have contributed to the identification of epigenetic events deregulated by specific environmental and lifestyle stressors. These findings continue to deepen our understanding of the mechanisms of carcinogenesis, particularly those linked to risk-factor exposures. In addition, important insights into epigenetic mechanisms and associated exposure risk factors have had a functional impact on the etiologies of specific human cancers.

**Goals:** The goals of this meeting are to evaluate recent scientific knowledge in the field of epigenetics and environmental origins of cancer, to determine future research needs in this area, and to assess the implications of such studies in cancer causation and prevention.
